Adaptalyfe — Product payment recommendation

Primary recommendation: Subscription SaaS + Freemium

Choose → Why for Adaptalyfe

Choose	Why for Adaptalyfe
Subscription SaaS	Core product is ongoing life-support software (tasks, caregivers, health) — needs recurring access and updates
Freemium / trial	Already in product: free default + 7-day trial + Basic / Premium / Family
Monthly + yearly	Matches landing + Stripe + Apple; Play monthly first
Fixed Stripe Price IDs	Pro ops; stops duplicate products (`STRIPE_PRICE_*`)
Store IAP on mobile	Required for digital subscriptions in iOS/Android apps

---

One-line decision

> *Adaptalyfe = **subscription product company** (Basic / Premium / Family × monthly / yearly), with freemium/trial; ecommerce or usage only as **separate** add-ons later.*

Plan catalog (what to sell)

Plan key	Display name	Monthly	Yearly (annual)
`basic`	Basic	$4.99	$49.99
`premium`	Premium	$12.99	$129.99
`family`	Family / Care Team	$24.99	$249.99

- API billing cycle: `monthly` | `annual`
- Free trial: **7 days**
- Package / bundle: `com.adaptalyfe.app`

What NOT to use as the core model

Avoid as core	Why
Pure ecommerce cart for plans	Plans are entitlements, not inventory SKUs
Marketplace	No seller payouts in current product
Donation-only	Cannot fund cloud + support reliably
One-time license only	Ongoing server/AI costs need renewals
Usage-only billing	Too complex as the only model

Keys vs per-user IDs (quick)

Type	Same for all users?	Example
Company keys / Price IDs	**Yes** (per env)	`STRIPE_SECRET_KEY`, `STRIPE_PRICE_PREMIUM_MONTHLY`
Customer billing IDs	**No** (per user)	`stripe_customer_id`, `stripe_subscription_id`, Apple/Play tokens

---

Database

No new columns required for this recommendation. Existing `users` subscription fields are enough. Price IDs and API keys stay in **environment variables**.
